That's perfect. Thank you sir.

The struggle is real! Lol

See you sometime soon.

Scott

Hi Scott,

To this day the only isotope labeled PFAS I can find unique associated with the Chemour site is HFPO-DA (GenX) and no others. It is from Wellington Labs in Canada. We are still stuck in what to do with getting native standards for most. In the usual Chemours compounds list I can find native for GenX, Nafion BP2, PEPA, PMPA and PFMOAA only (based on my recall). Every other compound is only available from Chemours.

Sorry if that is of little help.
Mark

Mark - I am working with Erin Barker on a pretty cool project and was wondering if you could help us out with identifying any available mass labeled standards for fluoroethers or any other classes of especial interest that are associated with Chemours production (GenX or others?).

We have samples from around the facility that we have identified a variety of PFAS and trying to cover our quantitative bases and trying to be thinking about the compounds of most interest.

Thanks a million - hope the Covid scares at EPA ease up!

Best - Scott
